

# xD Extender Board 1.0

## xD-Pictrue Card Extender

The xD Extender 1.0 is a debug and signal detection tool for xD-Pictrue card. It allows a xD-Picture card to be extended from the host slot for full access to the all of signal pins.

It's especially designed to save valuable labor and time in the production environment. The xD extender 1.0 is designed to minimize the signal degradation effects of the extender by proven design techniques. Separate Vcc and ground planes provide a low inductance path to the host's power supply.

The xD extender has the function of over-current protection with PTC fuse. A clearly marked jumper header allows probing of all of signal pins. It's also a powerful tool for engineers, or use for factory test protection.

The xD extender is constructed of high quality components for years of trouble free service. The SD extender is constructed of high quality components for years of trouble free service.

## Key Features

- Test connector for all of signal and power pins
- Any signal can be isolated with jumper block
- Power and ground can be isolated for power measurements
- LED indicates power status
- Adds dumping resistors for all of signals
- Vcc bypassed for clean power
- Supports xD-Picture cards
- High quality connectors for long service life
- Over-current protection with PTC fuse
- Passive adapter unnecessary

## Product Specifications

Support Card Type: xD-Picture card

### Dimension:

Width : 41mm

Length : 57mm

Thickness : 1.6mm Min

As professional distributor of Semiconductor, our business includes main NBPC and Cellular phone's manufacturer in the world wide. We provide strong support with multi-channel resource.
